SOFTWARE DEVELOPER | 1+ YEAR | JAVA | SPRING BOOT | BACKEND ENGINEERING

Software Developer with 1+ year of experience building scalable backend systems, high-performance APIs, and database-driven applications using Java and Spring Boot. Experienced in designing reliable software components, optimizing performance, solving complex engineering problems, and delivering production-ready systems in Agile environments. Demonstrated impact across API reliability, query optimization, defect reduction, and scalable architecture support.

CORE COMPETENCIES

- **Programming:** Java, SQL, Object-Oriented Programming, Data Structures, Algorithms, Collections, Exception Handling
- **Backend Development:** Spring Boot, Spring MVC, REST APIs, Spring Security, Transaction Management, Multithreading Concepts
- **Data & Persistence:** Spring Data JPA, Hibernate, MySQL, PostgreSQL, Database Design, Query Optimization, Indexing
- **Architecture:** Microservices Fundamentals, Distributed Systems, API Gateway, Event-Driven Architecture, Apache Kafka (Exposure)
- **API Engineering:** RESTful Services, Authentication, Authorization, Error Handling, Request/Response Validation, Swagger, Postman
- **Performance & Quality:** Debugging, Performance Tuning, Code Reviews, Low-Latency Processing, Defect Prevention
- **DevOps & Delivery:** Git, GitHub, Docker, CI/CD Fundamentals, Deployment Support
- **Design Principles:** SOLID Principles, Reusable Components, Design Patterns, Modular Architecture
- **Collaboration & Delivery:** Agile/Scrum, Jira, Sprint Planning, Production Support, Stakeholder Communication

PROFESSIONAL EXPERIENCE

Dorustree, Tiruchirappalli – Software Developer Trainee | Jun 2025 – Present | Immediate Joiner

KEY PROJECTS & IMPACT

Education Management System — Software Developer (Backend Engineering + API Development) | Jul 2025 – Jan 2026

- Owned design and development of scalable REST APIs across Student, Staff, Tasks and Finance modules, supporting critical institutional workflows and improving operational efficiency by 30%.
- Improved database performance by 20% through query optimization, relational modeling improvements, and efficient use of Spring Data JPA.
- Reduced integration defects by 25% by building and validating 20+ APIs with structured request-response contracts using Postman and Swagger.
- Implemented reusable backend components and transaction-safe business logic, improving maintainability and reducing defect leakage.
- Increased system reliability through performance tuning, structured debugging, and exception handling improvements for high-volume request processing.
- Drove end-to-end API delivery in collaboration with frontend teams, improving integration stability and reducing turnaround for issue resolution.
- Contributed to code quality through reviews, defect fixes, and production support, improving platform stability and engineering consistency.

- **Recognition:** Earned appreciation for ownership of backend delivery, strong execution discipline, and reliable solution implementation.

Rig Lift Management System — Software Developer (Backend Logic + Domain Engineering) | Oct 2025 – Nov 2025

- Designed and implemented backend services supporting lift planning workflows, improving planning efficiency and reducing manual effort.
- Built calculation logic for lift weights and constraint validation, improving operational planning accuracy by 30%.
- Reduced manual risk assessment effort by 25% through automation of pre-lift validation checks.
- Improved transactional efficiency through optimized data access patterns and backend performance enhancements.
- Translated complex domain requirements into scalable engineering solutions through direct collaboration with clients and iterative feature refinement.
- Strengthened system reliability through structured debugging, exception handling and targeted feature optimizations.
- **Recognition:** Recognized for solving complex business problems through practical, high-quality backend engineering.

Travel Marketing Platform — Software Developer (Frontend + Integration Support) | Jan 2026 – Present

- Delivered frontend enhancements using Angular and supported backend API integrations improving application usability and end-to-end reliability.
- Reduced production defects by 20% through targeted bug fixes, integration troubleshooting and issue resolution.
- Improved turnaround for integration defects by 20% through API validation, debugging and collaborative problem-solving.
- Contributed within microservices-oriented workflows with exposure to distributed communication and event-driven patterns.
- Supported production stability through performance troubleshooting and proactive issue resolution across frontend-backend interactions.
- **Recognition:** Appreciated for adaptability, engineering ownership and consistent execution across integration-heavy workstreams.

CERTIFICATIONS

- Programming in Core Java
- Advanced Programming in C
- Spring (3 & 6) and Hibernate Course
- IBM Cloud Technology Basics

EDUCATION

B.E — Computer Science and Engineering (2024) | Dhanalakshmi Srinivasan Institute of Technology | CGPA: 8.38
